

Transmission electron microscopy in life sciences

Practical Course

26th – 30th November 2018

IMG, Prague, Czech Republic

- Get a feeling of electron microscopy in biomedicine in one week
- Learn principles of electron microscopy and become an independent user
- Favourable registration fees – only 270 EUR (7000 CZK) for academic participants
- Highly experienced tutors – focus on hands-on training

Dear Colleagues,

We would like to invite you to the 5-day practical course "Transmission electron microscopy in life sciences".

The course is aimed at beginners and intermediate users of transmission electron microscopes. After the course, participants will understand the principles of construction and function of transmission electron microscopes, the basics of sample preparation techniques, and will receive the extensive practice during hands-on sessions on three transmission electron microscopes of varying complexity. The participants are encouraged to bring their own samples on TEM grids for imaging. The course will be taught in English.

The Course is organized by the Institute of Molecular Genetics CAS and the Czechoslovak Microscopy Society at the premises of the IMG in Prague on 26th – 30th November 2018. Favourable registration fees are set due to the support by the Czech-Bioimaging.

The registration deadline is 12th November, 2018.

We look forward to your participation!

On behalf of the organizers,

Vlada Filimonenko, email: coursetem@microscopytraining.eu
